

FOULFREE™

AIRMAR® CERTIFIED TRANSDUCER COATING*

Protect your transducer

Keep your transducer clear
with Foulfree™ transducer coating

* AIRMAR certifies that the application of Foulfree coating on its transducers results in no loss in transducer performance.

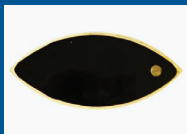

Transducer defense. Foul-release.

Airmar and PropSpeed® bring you Foulfree, a nontoxic, long-lasting, ultra-smooth surface that prevents marine fouling from sticking to the coated surface.

Marine growth on a transducer can negatively affect sonar performance, including significant turbulence noise on the screen while running or reducing the amount of detail on the sonar image received when fishing. Keeping the transducer free from growth and fouling ensures top performance from your transducer.

Easy to apply and long-lasting

One 15ml tube of Foulfree covers one square foot (0.09m²) area of transducer. Once applied, the surface will continue to protect for up to two years.

Transducer safe

Foulfree is Airmar certified and has no adverse effects on its transducers.

Nontoxic and eco-friendly

Once cured, Foulfree will not release any toxins into the environment.

Foul-release, not anti-foul

A super slick coating that marine growth cannot stick to.
