# ALUMINUM ANODES

*A better solution for every application...*

Longer Lasting...

Navalloy® anodes will work longer than Zinc because they have more capacity for the same overall size:

Capacity per unit weight is:

Zinc	368 Ampere Hours/lb
Magnesium	500 Ampere Hours/lb
Navalloy®	1150 Ampere Hours/lb

But density is:

Zinc	0.25 lb/cu in
Magnesium	0.06 lb/cu in
Navalloy®	0.10 lb/cu

Therefore the relative life expressed in A Hours/ cu inch is:

Zinc	92 Ampere Hours/cu inch
Magnesium	30 Ampere Hours/cu inch
Navalloy®	115 Ampere Hours/cu inch

So Navalloy® anodes will last up to 30% longer than Zinc and up to 4x longer than Magnesium!

Any Hull...

	Aluminum	Steel	Fibreglass	Wood
Navalloy®	✓	✓	✓	✓

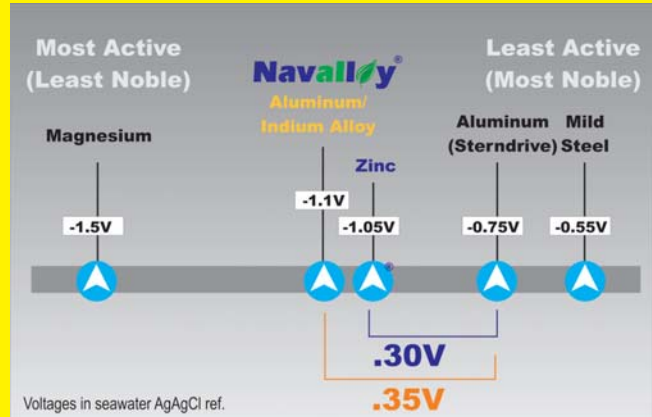

All Water Types...

	Salt	Brackish	Fresh
Zinc	✓		
Magnesium			✓
Navalloy®	✓	✓	✓

**ABYC** Navalloy® meets American Boat and Yacht Council requirements for use in all types of water.  
Boating Safety... Built In

Most outboard and sterndrive manufacturers now install Aluminum anodes as standard because they are safe and offer the best overall protection in any type of water.

Better Protection...

Navalloy® anodes work better than Zinc in saltwater because they generate a more negative voltage therefore providing increased protection. In freshwater Magnesium anodes can sometimes over-protect Aluminum hulls or outdrives. Navalloy® Mil. Spec. MIL-DTL-24779.

Any Kind of Use...

- Re-activates after exposure to air
- Works immediately on re-immersion
- No cleaning required

Navalloy® anodes can be left permanently immersed or can be used on boats that are regularly lifted in and out of the water (such as trailered boats, boats on lifts or boats left on the hard over winter). Zinc anodes will coat over if exposed to air and need to be burnished before re-immersion.

Exclusive RED SPOT Wear Indicator...

The patented red spot wear indicator is exclusive to Performance Metals Products. When the red spot appears it's time to change!

# ALUMINUM ANODES

**A better solution for every application...**

Eco-Friendly...

Why Use Navalloy?

Zinc anodes have 20 times more toxic elements

REDUCE POLLUTION!

Cadmium FREE

Mercury FREE

Navalloy® anodes are 20 times more eco-friendly than Zinc anodes. The EPA (Environmental Protection Agency) has identified Zinc anodes as a major cause of pollution in marinas and so now recommend the use of Aluminum anodes.

## Navalloy in Saltwater

### Key benefits over Zinc

- ✓ **Up to 30% longer lasting**
- ✓ **Increased protection**
- ✓ **20 times more eco-friendly**
- ✓ **Lighter weight**
- ✓ **Auto reactivating**

Lighter than Zinc...

Navalloy® anodes are lighter than Zinc which is 2 ½ times more dense than Aluminum.

## Navalloy in Freshwater

### Key benefits over Zinc

- ✓ **Up to 4 x longer lasting**
- ✓ **No risk of overprotection**

Zinc density                      0.25 lb/cu in (6.6gm/cc)  
 Aluminum density              0.10 lb/cu (2.8gm/cc)

Attractive Packaging...

Navalloy® anodes are packaged attractively with printed text in multiple languages including installation instructions. In many cases they are available in complete kits for maximum convenience.
