

TACO Marine® Grand Slam Outrigger Mounts

GS-800 VHF Antenna Mount

INSTALLATION INSTRUCTION GUIDE

⚠ WARNING:

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer, birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Kit Contents

1 Grand Slam 800 mount

1 Aluminum backing plate

1 Drill template

3 Vinyl tubing spacers

Required* *not included

- SAFETY GLASSES
- POWER DRILL
- SCREW GUN (OPTIONAL)
- MASKING TAPE & PENCIL
- 1/4" DRILL BIT
- 2-1/2" HOLE SAW
- THREE 1/4-20 FLAT, PHILLIPS HEAD SCREWS*
- THREE 1/4-20 NYLON LOCKING NUTS
- MARINE-GRADE SEALANT

* Fastener length may be different, depending on the application. For assistance, please contact TACO Technical Support on tacomarine.com.

TACO[®] Handy Tips

- Prepare for installation by ensuring the mounting surface is clean of any grease and/or dirt.
- Ensure your hardtop is suitably constructed to provide a strong mounting surface area for your antenna mount. The GS-800 was designed specifically to prevent climbing on the boat gunnel to raise and lower a VHF antenna.
- If the top is arched, wedge plates can be used to maintain proper alignment.

GS-800

Thank you for purchasing the Grand Slam 800 VHF Antenna Mount by TACO Marine. Since 1959, we have taken great pride in offering the highest-quality products with excellent customer service. We stand behind our products 100 percent. Please visit our website **tacomarine.com** for more detailed information on a wide variety of products and to register your new accessory for warranty.

Important notes:

- The maximum hardtop thickness allowable is 2".
- Verify template is printed at 100 percent.
- A backing plate is included for extra strength during your installation and is recommended to use when mounting through a hardtop.
- When installing the GS-800, designate the location for the mount at least 9" from the hardtop frame, vertical post or any other object that might hinder the rotation of the crank handle.
- Turning the crank assembly handle will allow the antenna to adjust to the full up position when rotating it counter-clockwise.
- Turning the handle clockwise will adjust the antenna to the full down position.
- Ensure the canvas T-top, arch or hardtop is of suitable construction to provide a strong mounting surface area.
- When installing on a hardtop, verify the top is foam or core filled.
- The GS-800 incorporates a folding crank handle that securely locks flush within the rotator base.

-
- The supplied template is only a guide to help align the base for true hole positioning.
 - Always use good quality stainless-steel hardware.
 - The best way to determine proper placement of the mount is to (1) identify the location of all the other components on the top and (2) ensure its location will be good for operating the mount from under the top when cranking the handle while standing on the deck of the boat. Because marine antennas vary in size and length, the right location may vary based on the length of the antenna.
 - Once you have determined the location and the position of the mount, then determine the length of the antenna that will be attached to the mount.
 - Before drilling into the top, ensure the mount position and the light will not interfere with other top-mounted accessories when it is in full up and full down positions.

HARDTOP INSTALLATION

Always use high-quality, stainless-steel hardware when mounting the base. Do not attempt to weld the base to any surface.

1. Verify the VHF antenna does not interfere with other top-mounted accessories.
2. Using the drill template provided, cut out a 2-1/2" diameter center hole on the top.
3. Position the base centered in the 2-1/2" hole.
4. Use the drill template to mark and then drill the three (3) boltholes with a 1/4" bit.
5. Place a bead of marine-grade sealant on the underside edge of the backing plate. This will prevent water intrusion.
6. With the assistance of a helper, position the backing plate around the base from under the top, align the holes in the base with the backing plate and insert the bolts through the base, top and backing plate.
7. Hold the bolts securely with a screwdriver or socket wrench while the nuts are threaded onto the bolts. Maximum allowable torque 40 in-lbs.
8. Tighten the nuts, being careful not to over-tighten and deform the top surface.
9. Clean any excess marine-grade sealant from the surface.

NOTE:

This product is intended for mounting on Fiberglass Hardtops or Pilot House enclosures. All of these styles of tops offer various mounting options. The desired location in all cases is one that allows the mount to raise and lower completely with no obstructions to other components on the top.

How to use

When boating with the Grand Slam 800 VHF Antenna Mount, easily raise and lower the antenna by turning the crank handle – either clockwise to lift or counterclockwise to lower. For going under bridges, trailering or storage, we recommend lowering the antenna to ensure it doesn't get damaged. When the antenna reaches its desired upright or fully lowered position, you can fold the crank handle flush into the base.

How to clean

Always use a mild, non-abrasive soap and fresh water. Thoroughly wash the aluminum with a soft towel or sponge to remove dried salt crystals and other contaminants. Rinse completely with fresh water.

Safe Cleaners

Mild dish washing liquid, specialty marine cleaners:

Sea Safe Boat Wash, Boat Wash Concentrate and Super Suds.

Safe marine lubricants:

CRC Corrosion Inhibitor, Corrosion Block and Get Some Extreme.

Harmful Cleaners

Bleach (Clorox, etc.) and mild abrasive cleaners:

Ajax, Comet, Soft Scrub, Rubbing Compounds, etc.

Strong cleaners:

409, Engine Degreasers, etc.

Acids of any type:

Such as Muriatic, naval jelly or aluminum acid.

We're here to help.
